

### REMARKS

The drawings are objected to for failure to show features of the invention specified in the claims. This objection is addressed in part by the amendment, and is otherwise traversed, for the reasons following.

The worm is not shown, but is not a feature of the invention. It is only a statement of use, i.e., "said shaft having one end *for* carrying a worm in a molding cylinder". As such it need not be shown in the drawing. Further references to worm have been deleted from the claim.

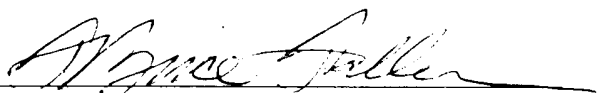

The specification has been amended to specifically refer to the motors as electric motors, identified by reference numerals 15 and 7 in Figure 1. The reference to permanent magnets has been deleted. These changes also address the objection to the specification as failing to provide antecedent basis for claim language.

The specification has been amended to refer to cylindrical part 16 of shaft 1, which is shown in Figure 1.

It is believed that the application is now in condition for allowance. If any objections remain, a call to the undersigned is requested.

It is believed that no fees or charges are required at this time in connection with the present application; however, if any fees or charges are required at this time, they may be charged to our Patent and Trademark Office Deposit Account No. 03-2412.

Respectfully submitted,  
COHEN, PONTANI, LIEBERMAN & PAVANE
